

Roku Channel Proposal by Chris Thompson for Tubi TV

Terms

Effort

I came up with an estimated total effort of just under 7 weeks. If we factor in Brian's time it would be around 5 weeks total time to deliver. These are "man-weeks" of effort, not real-world time. See Timeline below.

Timeline

I can commit 32 hours/wk @ \$3200/wk, which give me a nice time allowance to address ongoing needs of my business or some unknown issues which come up in this project. If we start on July 5, allowing for my unavailability July 18-22, we should be tidying things up second half of August.

Strategy & Milestones

As requested by the client, Tubi & Marios, we'll start off with refactoring of existing HTTP API code. I've allowed about a week's time for this effort.

Subsequently, UI work will be addressed by incrementally adding screens and functionality. The following order is recommended:

- Welcome and Main Grid screen
- Detail Screen
- Integrate existing Video Player
- Build Series/Episode Screen
- Build Search Screen
- Build Sign In / Sign Up flow
- Add History & Queue functionality
- Analytics sweep

Since this is a weekly/hourly engagement, milestones will be discussed and subject to change as the job progresses.

Risks

Scene Graph: I want to be very transparent about risk of adopting the Scene Graph API. Behavior and documentation are changing as bugs are reported and API design issues are found. I recommend addressing this risk by publishing the updated channel after 7.2 firmware update is delivered, running a thorough test suite, and making sure that analytics are monitored closely.

Updated Channel Publishing Checklist: A new checklist was published 2 weeks ago, the most notable change requires all channels to support deep linking. This should be accounted for in the redesign requirements. I have a client whose channel is going through approval now, so any surprises during publishing should pop up in the next week or two.

Requirements changes: We'll do a weekly contract, so we can just decide week-to-week when to end or extend the engagement.

Legal/Financial Upwork engagement contract is pretty well worded regarding IP ownership, etc. <https://www.upwork.com/legal/> I'll declare existing background items I may bring along, like test framework and Roku's SDK, and we'll attach the scope of work docs to the job. That should address all of our legal needs.

Payment

Payments will be made through Upwork's hourly billing feature.

IP

Ownership of IP within the Work Product, as defined by Upwork terms, will transfer each week as payments are made via Upwork and deliverables are given to the client.

Scope of Work

Roku Channel Checklist

	Item	Requirements

1	Authentication/DRM for Content	No DRM. Content will have pre-authenticated URLs
2	Authentication for metadata	Queue management & history done via JWT, access token, & refresh token
3	Billing	None
4	Channel Design- UI	All designs, mockups, and final assets will be provided by Tubi. See documents roku_redline_HD_1280x720_no_logo_on_top.pdf and RokuProjectHighLevelSpec.pdf
5	Publishing	Tubi will be self-publishing the channel
6	Stream Encoding Format	Tubi will manage stream encoding and verify its compatibility with targeted Roku devices
7	Metadata Format/Protocol	All API endpoints will be designed and implemented by Tubi
8	Analytics	- Analytics API endpoint will be designed and implemented by Tubi - Tubi will enumerate all points metrics & events - Metrics are: every 10 seconds send events. - API reuses same 5 fields
9	Ads	Tubi will manage all ad playback requirements and implementation
10	Hosting for Content	Tubi will manage all content hosting requirements
11	Hosting for Metadata	Tubi will manage all metadata hosting requirements
12	TV Everywhere	No TV Everywhere.
13	Live streaming?	TBD
14	Marketing needs for the channel?	None needed.
	Deep linking / Roku	Deep linking requirements as specified by Roku will need to

15	global search support	be designed and built in to the channel
----	-----------------------	---

Items to be provided by Chris Thompson:

- Asset requirements: size, dimensions, pixel-ratio, etc.
- Handoff documentation which may include architecture documentation, screen flows, and build instructions
- Channel source code
- Any Background Technology as defined by Upwork which is used

Items to be provided by Tubi

- Documentation for existing metadata, authentication, and content APIs
- Visual designs and image assets
- List of analytics events and metrics to be captured
- Any existing source code which will be re-used for the new channel implementation, such as HTTP API handling
